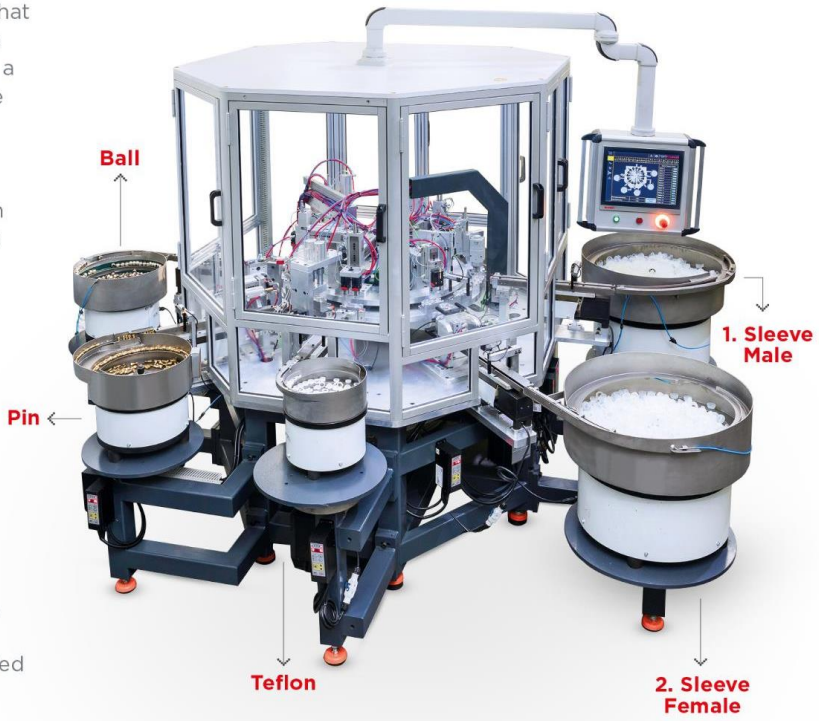
WORK CYCLE / MAIN FEATURES
ROUND TABLE WITH 16 DIVISIONS

- 16 positions for the valve body
- 16 positions for teflon
- 16 positions for the sleeve male
- 16 positions for the sleeve female
- 16 positions for the ball
- 16 positions for the pin

It consists of a rectangular base, a servo-controlled rotating table that is electronically programmable via a Touch Screen control panel, and a rotating disk with positions for the placement of the parts.

The machine is also equipped with a Touch Screen control panel from which the machine setup can be easily managed automatically during each equipment change, batch and/or article change, and production data can be monitored via mobile devices.

The centralized supervisor can be connected to the management database for data transfer, strictly following the requirements of the **Smart Factory and Industry 4.0 project.**


All components are manually loaded by the operator. The unloading is automatic with the selection of good parts and discrimination of waste types.
